Debt Offerings

ADC Therapeutics Raises USD175 Million in Private Placement of Senior Secured Term Loan due 2029

ADC Therapeutics Raises USD175 Million in Private Placement of Senior Secured Term Loan due 2029			
Deal Type	Debt Offering	Deal Sub Type	Private Placement
Deal in Brief			
<p>ADC Therapeutics SA announced that it has completed a series of strategic transactions in which entered into a new USD175 million senior secured term loan with certain funds of Owl Rock, a division of Blue Owl Capital, Inc. (Owl Rock), and funds managed by Oaktree Capital Management, L.P. (Oaktree) with an upfront tranche of USD120 million received upon closing today; Settled in full the \$115 million aggregate principal amount of senior secured convertible notes held by Deerfield Management Company ("Deerfield") due May 2025 for (i) \$117.3 million in cash including the contractual exit fee on principal repayment, (ii) 2,390,297 common shares approximately equal to the value of the remaining interest due on the convertible debenture to the end of term, and (iii) warrants to purchase an aggregate of 4,412,840 common shares at exercise prices of \$24.70 and \$28.07 per share; Entered into a share purchase agreement with certain funds of Owl Rock, a division of Blue Owl Capital Inc., for an investment of \$6.25 million for 733,568 common shares. "We are pleased to enter into this agreement with Owl Rock and Oaktree, the proceeds of which will be used to pay the cash consideration in the exchange of the secured convertible credit notes held by Deerfield," said Ameet Mallik, Chief Executive Officer of ADC Therapeutics. "This new debt facility has a term of seven years and enables us to continue maximizing the potential of ZYNLONTA and advancing our pipeline of novel antibody drug conjugates for hematologic malignancies and solid tumors. The continued equity support of Deerfield and the additional equity support from Owl Rock is also very positive, and we are pleased to maintain our cash runway into early 2025 as this deal is approximately cash neutral during that timeframe." Pursuant to the loan and guaranty agreement, the Company completed an initial drawdown of USD120 million on August 15, 2022. This amount was used by the Company to fund the cash consideration as part of the settlement of Deerfield's senior secured convertible notes. Up to two additional tranches in the amount of USD27.5 million each can be drawn by the Company upon meeting certain conditions within 18 months. The term loan matures on August 15, 2029 and accrues interest at an annual rate of secured overall financing rate (SOFR) plus 7.50% or a base rate plus 6.50% for the first five years of the term loans and at an annual rate of SOFR plus 9.25% or a base rate plus 8.25% thereafter. In addition, the Company issued to the lenders under the term loan warrants to purchase an aggregate number of common shares equal to USD4.375 million divided by the volume weighted-average price of the common shares for the ten trading days prior to their issuance and the ten trading days on and after their issuance, which warrants are exercisable for ten years from their issuance. Sandip Agarwala, Managing Director with Owl Rock commented, "This transaction displays our ability to integrate our life sciences sector expertise and tailored multi-security approach to help provide growth capital to companies like ADC Therapeutics. We are pleased to invest in ADC Therapeutics' strong team, portfolio and track record of success in developing and commercializing life-saving cancer therapies including ZYNLONTA." "We are excited to partner with ADC Therapeutics as it continues to develop a pipeline of novel ADCs for hematologic malignancies and solid tumors," said Aman Kumar, Co-Portfolio Manager of Life Sciences Lending at Oaktree. "This is an important time in the Company's development with its first product approval validating its first-in-class ADC platform. This commitment of capital represents our belief in the long-term potential of ADC Therapeutics and we look forward to working with the Company's leadership team during this next phase of growth." Elise Wang, Partner, Head of Private Equity Capital Markets at Deerfield said: "We have been a supporter of ADC Therapeutics dating back to its successful IPO in May 2020 as both an equity investor in the IPO and also providing the convertible debenture that is being retired today. We are very pleased to take a significant portion of the repayment consideration in ADCT stock and look forward to continuing to support the company going forward." Morgan Stanley & Co. LLC acted as the sole placement agent to ADC Therapeutics on this transaction.</p>			
Deal Rationale			
ADC Therapeutics intends to use the net proceeds to continue maximizing the potential of ZYNLONTA and advancing our pipeline of novel antibody drug conjugates for hematologic malignancies and solid tumors.

Private Equity

TSG Consumer Partners Invests in Specialty Dental Brands

TSG Consumer Partners Invests in Specialty Dental Brands			
Deal Type	Private Equity	Deal Sub Type	Direct Investment
Deal in Brief			
<p>Specialty Dental Brands (“SDB”), a leading dental support organization (DSO), TSG Consumer Partners (“TSG”), a leading private equity firm, and Leon Capital Group (“LCG”) today announced that they have finalized a growth partnership. SDB management, including CEO Michael Schwartz and President Chris Scales, will continue to lead the business and its doctor partners will maintain significant ownership and complete clinical autonomy. SDB is one of the largest, multi-specialty-only dental support organizations in the U.S., providing a broad range of business support services to oral surgery, pediatric dentistry, and orthodontic practices. SDB’s rapidly expanding support platform of industry-leading specialists includes over 211 supported dental practices across 20 states. “I want to thank our doctor partners and the rest of the SDB team for the outstanding work we’ve accomplished together as we have expanded across the country,” said Michael Schwartz, CEO of SDB. “The growth partnership with TSG Consumer Partners further strengthens SDB’s ability to support the best specialists in their unwavering mission to provide the highest quality of patient care. TSG shares our collective belief with LCG that high-quality patient care starts with supporting the best doctor partners and teams across the country and has an established track record of building leading brands and businesses. As an organization we aim to have a positive impact on our staff, supported doctors, their patients, and the communities we serve – TSG will help us double down on this for all our constituents.” “We are proud to have launched Specialty Dental Brands alongside its outstanding management team and supported the Company’s significant growth over the years,” said Hunter Dallas, Partner at Leon Capital Group. “We are excited about the partnership with TSG and for the next phase of growth as we work together to continue to support doctor-led innovation and expand access to high-quality care.” “SDB’s ability to expand rapidly while maintaining focus on supporting the nation’s leading specialists has been truly impressive, and we believe SDB has created the premier platform within dental care,” said Colin Welch, Managing Director and Head of New York and London Offices at TSG. “We are thrilled to leverage our consumer and branding expertise to support SDB’s continued momentum and deliver best-in-class oral health outcomes to patients through the tailored support services SDB provides to its doctor partners,” added Edward Wong, Managing Director at TSG. Rich Agabs, Atishay Chopra and Brian Castiglioni of Jefferies LLC served as exclusive financial advisor through its Essential Outpatient Healthcare franchise, Sidley Austin LLP served as legal counsel, and McGuire Woods LLP served as regulatory counsel to Specialty Dental Brands. William Blair & Company and SVB Securities served as financial advisors and Ropes & Gray LLP served as legal advisor to TSG.</p>			
Deal Rationale			
The investment will further strengthen SDB’s ability to support the best specialists in their unwavering mission to provide the highest quality of patient care.

Section 6 – Appendix

The data and analysis within this report is driven by GlobalData.

GlobalData gives you key information to drive sales, investment and deal making activity in your business.

Our coverage includes 200,000 + reports on 185,000+ companies (including 150,000+ private) across 200+ countries and 29 industries. The key industries include Alternative Energy, Oil & Gas, Clean Technology, Technology and Telecommunication, Pharmaceutical and Healthcare, Power, Financial Services, Chemical and Metal & Mining.

Methodology

GlobalData company reports are based on a core set of research techniques which ensure the best possible level of quality and accuracy of data. The key sources used include:

- Company Websites
- Company Annual Reports
- SEC Filings
- Press Releases
- Proprietary Databases

Ratio Definitions

Capital Market Ratios

Capital Market Ratios measure investor response to owning a company's stock and also the cost of issuing stock.

Price/Earnings Ratio (P/E)	<p>Price/Earnings (P/E) ratio is a measure of the price paid for a share relative to the annual income earned per share. It is a financial ratio used for valuation: a higher P/E ratio means that investors are paying more for each unit of income, so the stock is more expensive compared to one with lower P/E ratio. A high P/E suggests that investors are expecting higher earnings growth in the future compared to companies with a lower P/E. Price per share is as of previous business close, and EPS is from latest annual report.</p> <p>Calculation: Market Cap / Net Income</p>
Enterprise Value/Earnings before Interest, Tax, Depreciation & Amortization (EV/EBITDA)	<p>Enterprise Value/EBITDA (EV/EBITDA) is a valuation multiple that is often used in parallel with, or as an alternative to, the P/E ratio. The main advantage of EV/EBITDA over the PE ratio is that it is unaffected by a company's capital structure. It compares the value of a business, free of debt, to earnings before interest. Price per share is as of previous business close, and shares outstanding last reported. Other items are from latest annual report.</p> <p>Calculation: $\{(\text{Market Cap} + \text{Debt} + \text{Minority Interest} + \text{Preferred Stock (Redeemable} + \text{Non-Redeemable)} - \text{Cash \& Cash Equivalents})\} / (\text{Operating Income} + \text{Depreciation} + \text{Amortization})$</p>
Enterprise Value/Sales	<p>Enterprise Value/Sales (EV/Sales) is a ratio that provides an idea of how much it costs to buy the company's sales. EV/Sales is seen as more accurate than Price/Sales because market capitalization does not take into account the amount of debt a company has, which needs to be paid back at some point. Price per share is</p>

Enterprise Value/Operating Profit	as of previous business close, and shares outstanding last reported. Other items are from latest annual report. Calculation: $\{(\text{Market Cap} + \text{Debt} + \text{Minority Interest} + \text{Preferred Stock (Redeemable} + \text{Non-Redeemable)} - \text{Cash \& Cash Equivalents})\} / \text{Revenue}$
	Enterprise Value/Operating Profit measures the company's enterprise value to the operating profit. Price per share is as of previous business close, and shares outstanding last reported. Other items are from latest annual report. Calculation: $\{(\text{Market Cap} + \text{Debt} + \text{Minority Interest} + \text{Preferred Stock (Redeemable} + \text{Non-Redeemable)} - \text{Cash \& Cash Equivalents})\} / \text{Operating Income}$
Enterprise Value/Total Assets	Enterprise Value/Total Assets measures the company's enterprise value to the total assets. Price per share is as of previous business close, and shares outstanding last reported. Other items are from latest annual report. Calculation: $\{(\text{Market Cap} + \text{Debt} + \text{Minority Interest} + \text{Preferred Stock (Redeemable} + \text{Non-Redeemable)} - \text{Cash \& Cash Equivalents})\} / \text{Total Assets}$
Dividend Yield	Dividend Yield shows how much a company pays out in dividends each year relative to its share price. In the absence of any capital gains, the dividend yield is the return on investment for a stock. Calculation: Annual Dividend per Share / Price per Share

GlobalData

Equity Ratios

These ratios are based on per share value.

Earnings per Share (EPS)	Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of common stock. EPS serves as an indicator of a company's profitability. Calculation: $\text{Net Income} / \text{Weighted Average Shares}$
Dividend per Share	Dividend is the distribution of a portion of a company's earnings, decided by the board of directors, to a class of its shareholders.
Dividend Cover	Dividend cover is the ratio of company's earnings (net income) over the dividend paid to shareholders. Calculation: $\text{Earnings per share} / \text{Dividend per share}$
Book Value per Share	Book Value per Share measure used by owners of common shares in a firm to determine the level of safety associated with each individual share after all debts are paid accordingly. Calculation: $\{\text{Shareholders Equity} - \text{Preferred Stock (Redeemable} + \text{Non-Redeemable})\} / \text{Outstanding Shares}$
Cash Value per Share	Cash Value per Share is a measure of a company's cash (cash & equivalents on the balance sheet) that is determined by dividing cash & equivalents by the total shares outstanding. Calculation: $\text{Cash \& equivalents} / \text{Outstanding Shares}$

GlobalData

Profitability Ratios

Profitability Ratios are used to assess a company's ability to generate earnings, based on revenues generated or resources used. For most of these ratios, having a higher value relative to a competitor's ratio or the same ratio from a previous period is indicative that the company is doing well.

Gross Margin	Gross margin is the amount of contribution to the business enterprise, after paying for direct-fixed and direct-variable unit costs. Calculation: $(\text{Gross Profit} / \text{Revenue}) * 100$
Operating Margin	Operating Margin is a ratio used to measure a company's pricing strategy and operating efficiency.

	Calculation: (Operating Income / Revenue) *100
Net Profit Margin	<p>Net Profit Margin is the ratio of net profits to revenues for a company or business segment - that shows how much of each dollar earned by the company is translated into profits.</p> <p>Calculation: (Net Profit / Revenue) *100</p>
Profit Markup	<p>Profit Markup measures the company's gross profitability, as compared to the cost of revenue.</p> <p>Calculation: Gross Income / Cost of Revenue</p>
PBIT Margin (Profit Before Interest & Tax)	<p>Profit Before Interest & Tax Margin shows the profitability of the company before interest expense & taxation.</p> <p>Calculation: {(Net Profit+Interest+Tax) / Revenue} *100</p>
PBT Margin (Profit Before Tax)	<p>Profit Before Tax Margin measures the pre-tax income over revenues.</p> <p>Calculation: {Net Income Before Tax / Revenue} *100</p>
Return on Equity	<p>Return on Equity measures the rate of return on the ownership interest (shareholders' equity) of the common stock owners.</p> <p>Calculation: (Net Income / Shareholders Equity)*100</p>
Return on Capital Employed	<p>Return on Capital Employed is a ratio that indicates the efficiency and profitability of a company's capital investments. ROCE should always be higher than the rate at which the company borrows; otherwise any increase in borrowing will reduce shareholders' earnings.</p> <p>Calculation: Operating Income / (Total Assets – Current Liabilities) * 100</p>
Return on Assets	<p>Return on Assets is an indicator of how profitable a company is relative to its total assets, the ratio measures how efficient management is at using its assets to generate earnings.</p> <p>Calculation: (Net Income / [Current Year Total Assets + Last Year Total Assets]/2)]*100</p>
Return on Fixed Assets	<p>Return on Fixed Assets measures the company's profitability to its fixed assets (property, plant & equipment).</p> <p>Calculation: (Net Income / [Current Year Fixed Assets + Last Year Fixed Assets]/2)] * 100</p>
Return on Working Capital	<p>Return on Working Capital measures the company's profitability to its working capital.</p> <p>Calculation: {Operating Income / (Current Assets-Current Liabilities)} * 100</p>

GlobalData

Cost Ratios

Cost ratios help to understand the costs the company is incurring as a percentage of sales.

Operating costs (% of Sales)	<p>Operating costs as percentage of total revenues measures the operating costs that a company incurs compared to the revenues.</p> <p>Calculation: (Operating Expenses / Revenue) *100</p>
Administration costs (% of Sales)	<p>Administration costs as percentage of total revenue measures the selling, general and administrative expenses that a company incurs compared to the revenues.</p> <p>Calculation: (Administrative Expenses / Revenue) *100</p>
Interest costs (% of Sales)	<p>Interest costs as percentage of total revenues measures the interest expense that a company incurs compared to the revenues.</p> <p>Calculation: (Interest Expenses / Revenue) *100</p>

GlobalData

Liquidity Ratios

Liquidity ratios are used to determine a company's ability to pay off its short-term debts obligations. Generally, the higher the value of the ratio, the larger the margin of safety that the company possesses to cover short-term debts. A company's ability to turn short-term assets into cash to cover debts is of the utmost importance when creditors are seeking payment. Bankruptcy analysts and mortgage originators frequently use the liquidity ratios to determine whether a company will be able to continue as a going concern.

Current Ratio Current Ratio measures a company's ability to pay its short-term obligations. The ratio gives an idea of the company's ability to pay back its short-term liabilities (debt and payables) with its short-term assets (cash, inventory, receivables). The higher the current ratio, the more capable the company is of paying its obligations. A ratio under 1 suggests that the company would be unable to pay off its obligations if they came due at that point.

Calculation: $\text{Current Assets} / \text{Current Liabilities}$

Quick Ratio Quick ratio measures a company's ability to meet its short-term obligations with its most liquid assets.

Calculation: $(\text{Current Assets} - \text{Inventories}) / \text{Current Liabilities}$

Cash Ratio Cash ratio is the most stringent and conservative of the three short-term liquidity ratio. It only looks at the most liquid short-term assets of the company, which are those that can be most easily used to pay off current obligations. It also ignores inventory and receivables, as there are no assurances that these two accounts can be converted to cash in a timely matter to meet current liabilities.

Calculation: $\{(\text{Cash \& Bank Balance} + \text{Marketable Securities}) / \text{Current Liabilities}\}$

GlobalData

Leverage Ratios

Leverage ratios are used to calculate the financial leverage of a company to get an idea of the company's methods of financing or to measure its ability to meet financial obligations. There are several different ratios, but the main factors looked at include debt, equity, assets and interest expenses.

Debt to Equity Ratio Debt to Equity Ratio is a measure of a company's financial leverage. The debt/equity ratio also depends on the industry in which the company operates. For example, capital-intensive industries tend to have a higher debt-equity ratio.

Calculation: $\text{Total Debt} / \text{Shareholders Equity}$

Debt to Capital Ratio Debt to capital ratio gives an idea of a company's financial structure, or how it is financing its operations, along with some insight into its financial strength. The higher the debt-to-capital ratio, the more debt the company has compared to its equity. This indicates to investors whether a company is more prone to using debt financing or equity financing. A company with high debt-to-capital ratios, compared to a general or industry average, may show weak financial strength because the cost of these debts may weigh on the company and increase its default risk.

Calculation: $\{\text{Total Debt} / (\text{Total Debt} + \text{Shareholders Equity})\}$

Interest Coverage Ratio Interest Coverage Ratio is used to determine how easily a company can pay interest on outstanding debt, calculated as earnings before interest & tax by interest expense.

Calculation: $\text{Operating Income} / \text{Interest Expenses}$

GlobalData

Efficiency Ratios

Efficiency ratios measure a company's effectiveness in various areas of its operations, essentially looking at maximizing its use of resources.

Fixed Asset Turnover Fixed Asset Turnover ratio indicates how well the business is using its fixed assets to generate sales. A higher ratio indicates the business has less money tied up in fixed assets for each currency unit of sales revenue. A declining ratio may indicate that the business is over-invested in plant, equipment, or other fixed assets.

	Calculation: $\text{Revenue} / [(\text{Current Year Fixed Assets} + \text{Last Year Fixed Assets})/2]$
Asset Turnover	<p>Asset turnover ratio measures the efficiency of a company's use of its assets in generating sales revenue to the company. A higher asset turnover ratio shows that the company has been more effective in using its assets to generate revenues.</p> <p>Calculation: $\text{Revenue} / [(\text{Current Year Total Assets} + \text{Last Year Total Assets})/2]$</p>
Current Asset Turnover	<p>Current Asset Turnover indicates how efficiently the business uses its current assets to generate sales.</p> <p>Calculation: $\text{Revenue} / [(\text{Current Year Current Assets} + \text{Last Year Current Assets})/2]$</p>
Inventory Turnover	<p>Inventory Turnover ratio shows how many times a company's inventory is sold and replaced over a period. A low turnover implies poor sales and, therefore, excess inventory. A high ratio implies either strong sales or ineffective buying.</p> <p>Calculation: $\text{Cost of Goods Sold} / [(\text{Current Year Inventory} + \text{Last Year Inventory})/2]$</p>
Working Capital Turnover	<p>Working Capital Turnover is a measurement to compare the depletion of working capital to the generation of sales. This provides some useful information as to how effectively a company is using its working capital to generate sales.</p> <p>Calculation: $\text{Revenue} / (\text{Current Assets} - \text{Current Liabilities})$</p>
Capital Employed Turnover	<p>Capital employed turnover ratio measures the efficiency of a company's use of its equity in generating sales revenue to the company.</p> <p>Calculation: $\text{Revenue} / (\text{Total Assets} - \text{Current Liabilities})$</p>
Capex to sales	<p>Capex to Sales ratio measures the company's expenditure (investments) on fixed and related assets' effectiveness when compared to the sales generated.</p> <p>Calculation: $(\text{Capital Expenditure} / \text{Sales}) * 100$</p>
Net income per Employee	<p>Net income per Employee looks at a company's net income in relation to the number of employees they have. Ideally, a company wants a higher profit per employee possible, as it denotes higher productivity.</p> <p>Calculation: $\text{Net Income} / \text{No. of Employees}$</p>
Revenue per Employee	<p>Revenue per Employee measures the average revenue generated per employee of a company. This ratio is most useful when compared against other companies in the same industry. Generally, a company seeks the highest revenue per employee.</p> <p>Calculation: $\text{Revenue} / \text{No. of Employees}$</p>
Efficiency Ratio	<p>Efficiency Ratio is used to calculate a bank's efficiency. An increase means the company is losing a larger percentage of its income to expenses. If the efficiency ratio is getting lower, it is good for the bank and its shareholders.</p> <p>Calculation: $[\text{Non-interest expense} / (\text{Net Interest Income} + \text{Non-Interest Income})] * 100$</p>
GlobalData	

Notes

- Financial information of the company is taken from the most recently published annual reports or SEC filings
- The financial and operational data reported for the company is as per the industry defined standards
- Revenue converted to USD at average annual conversion rate as of fiscal year end

About GlobalData

GlobalData is one of the world's leading providers of company operational data and strategic analysis, providing detailed information on tens of thousands of companies globally. Our highly qualified team of Analysts, Researchers, and Solution Consultants use proprietary data sources and various tools and techniques to gather, analyze and represent the latest and the most reliable information essential for businesses to sustain a competitive edge. Data is continuously updated and revised by large teams of research experts, so that it always reflects the latest events and information. With a large dedicated research and analysis capability, GlobalData employs rigorous primary and secondary research techniques in developing unique data sets and research material for this series and its other reports. GlobalData offers comprehensive geographic coverage across world's most important sectors, focusing particularly on energy and healthcare.
